SUMMARY

AI builder and technical translator, currently completing an M.S. in Artificial Intelligence (4.0 GPA). Shipped a fully local, voice-interactive lecture assistant now used in a Baylor professor's classroom; evaluate frontier-LLM outputs at Mercor; two years of client-facing startup operations. Strongest at the seam between working software and the people who need it — scoping, shipping end to end, and teaching others to use what I build.

EDUCATION

M.S., Artificial Intelligence — University of Colorado Boulder (4.0 GPA, alongside full-time work) *Expected Dec 2027*

B.S., Neuroscience — Baylor University · honors · Presidential Merit Scholar · 2× hackathon winner *May 2026*

SELECTED PROJECTS

prof-ai — Local AI Lecture Assistant Python · Ollama · ChromaDB · faster-whisper · Piper TTS *deployed, in classroom use*

- Built end to end and deployed with a real user: live lecture transcription, retrieval-augmented Q&A grounded in the professor's own course materials, and spoken answers through a web interface. In active classroom use at Baylor.
- Runs entirely on local hardware — zero per-query cost, no student data leaving the room — enabling adoption with no budget or procurement; scoped and iterated directly with the professor.

AutoApply — Job-Search Automation Platform FastAPI · Vue 3 · PostgreSQL · Celery/Redis · Playwright · Ollama

- Full-stack system that ingests roles from ATS APIs, scores fit with explainable rules, generates fact-checked tailored resumes and cover letters with local LLMs, and gates every submission behind human review.

Apoapsis Harness — Verification Layer for Coding Agents Python · SQLite · Git · Ollama

- Routes agent work between local and hosted models — routine search, edits, and checks stay local; harder planning escalates with only the context it needs. Task state, worktrees, and a full audit trail in SQLite + Git.

Kitchen Remix — AI Remodel Visualizer (FLUX.1 Kontext · React · FastAPI): local image-editing app previewing kitchen remodels from photos, with reliability labels separating trustworthy edits from model guesses.

EXPERIENCE

AI Model Evaluator — Mercor (contract) *May 2026 – Present*

- Evaluate LLM outputs for reasoning accuracy, factual consistency, and instruction-following against structured rubrics across technical and generalist domains; document failure modes precisely enough for others to reproduce them.

AI Data Annotator — Outlier (contract) *Mar 2024 – May 2026*

- Labeled complex datasets and wrote precise instructions to improve model outputs and evaluation; calibrated with other raters and escalated edge cases to engineers.

Product & Operations Analyst — Superior Data Science (B2B SaaS startup) *Jan 2024 – Oct 2025*

- Generalist across client onboarding, analytics, and product ops; translator between engineering and non-technical stakeholders.
- Redesigned client onboarding end to end, cutting time-to-value ~30% and reducing internal escalations.
- Built Looker Studio dashboards on engagement and funnel health used by sales and product to prioritize; wrote plain-language guides that client-facing teams adopted as standard workflow.

Therapy Technician — Encompass Health (inpatient rehabilitation) *Jan 2022 – Dec 2022*

- Direct patient and family care in a high-stress clinical unit; proactive expectation-setting contributed to a ~32% rise in unit satisfaction scores.

SKILLS & TOOLS

Building: Python, SQL, JavaScript · LLM/RAG (Ollama, ChromaDB) · model evals · FastAPI · React/Vue · Docker · Claude Code

Product & ops: Looker Studio, Excel, WordPress, Google Ads · Gainsight and HubSpot certified
