## AI PRODUCT OPERATIONS | SOLUTIONS DISCOVERY | LLM EVALUATION & DELIVERY

### SUMMARY

AI operations and solutions professional who turns ambiguous problems into defined workflows, evidence-based decisions, and usable tools. Owns discovery, problem framing, requirements, evaluation, acceptance criteria, and iteration; directs AI-assisted implementation and validates resulting systems against real users and operational constraints. Background spans B2B SaaS implementation, LLM evaluation, and deployed AI products. U.S. permanent resident.

### EXPERIENCE

- AI Model Evaluator | Mercor | Remote**May 2026 - Present
- Evaluate LLM outputs for reasoning accuracy, factual consistency, and instruction alignment across technical and general domains.
  - Write actionable failure-mode analyses in ambiguous cases, separating evidence, assumptions, and decision criteria so reviewers can reproduce judgments.
- Operations Analyst & Startup Generalist | SDS, B2B SaaS | Remote**Jan 2024 - Oct 2025
- Led discovery with client businesses to map workflows, prioritize AI use cases, and turn findings into implementation blueprints and handoff documentation.
  - Redesigned onboarding, cutting time to value about 30%; diagnosed recurring friction and standardized the path from signup to activation.
  - Built Looker Studio dashboards to surface onboarding health and support earlier intervention; contributed to a funnel redesign that lifted qualified-demo conversion about 25%.
  - Translated product capabilities into plain-language guides used across client-facing workflows, bridging leadership, delivery, and technical teams.

### SELECTED PROJECTS

- Verity | BTC Prediction-Market Evidence Lab | Product Owner / Research Lead**Aug 2026 - Present
- Defined the research question, data boundaries, requirements, and acceptance criteria for a read-only dashboard comparing a settlement-aware model with market prices.
  - Directed AI coding agents through implementation while owning research, specifications, validation, and go/no-go decisions; required causal data gates, paper-only execution, and explicit no-trade conditions.
  - Reviewed an initial six-day record of 443 settled markets, rejected an unsupported profitability story when results did not consistently beat the market baseline, and kept real-money execution disabled.
- Prof AI | Voice-Interactive Lecture Assistant | Product Owner**Dec 2025 - Jun 2026
- Scoped the solution directly with a Baylor neuroscience professor, making privacy, local deployment, voice interaction, and classroom usability explicit acceptance criteria.
  - Directed AI-assisted delivery and iteration of a system now running on the professor's lab machine; it answers spoken questions over course materials without sending student data outside the room.

### EDUCATION

- University of Colorado Boulder | M.S., Artificial Intelligence**Expected Dec 2027
- Baylor University | B.S., Neuroscience | Presidential Merit Scholarship**May 2026

### CAPABILITIES

AI & Product Operations: discovery, workflow mapping, requirements, process design, acceptance criteria, quality assurance, model evaluation, human-review gates, experiment design, documentation, stakeholder communication  
Business & Technical Fluency: Looker Studio, HubSpot, Gainsight; RAG and local-AI workflows; API and data-pipeline concepts; dashboards, research operations, and AI coding-agent orchestration
