SUMMARY

Neuroscience graduate who builds working AI tools end to end and teaches the people around him to use them. Shipped a fully local, voice-interactive lecture assistant now in active classroom use by a Baylor professor, with wider university adoption under consideration. Startup generalist with a track record of translating between engineers and non-technical stakeholders, with hands-on experience across education, healthcare, and small business.

SELECTED PROJECTS

prof-ai | Local AI Lecture Assistant *Python, Ollama, ChromaDB, faster-whisper, Piper TTS*

- Built a voice-interactive classroom assistant end to end: live lecture transcription, retrieval-augmented Q&A grounded in the professor's own course materials, and spoken answers through a web interface.
- Runs entirely on local consumer hardware. No per-query costs and no student or course data leaving the room, which made adoption possible with zero budget and no procurement process.
- Scoped and iterated directly with the professor, designing a lecture / question / processing state machine and a multi-turn conversation mode. In active classroom use, with wider university adoption and funding under consideration.

kitchen-remix | AI Remodel Visualizer *FastAPI, React + Vite, FLUX.1 Kontext*

- Full-stack web app that turns kitchen photos into remodel visualizations using a local image-generation pipeline on consumer GPU hardware.

AutoApply | Browser Automation Agent *Playwright, Ollama, SQLAlchemy*

- Local agent that drives a browser to fill web forms and drafts tailored documents with local LLMs.

EXPERIENCE

AI Model Evaluator | Mercor (contract)

May 2026 - Present

- Evaluate LLM outputs for reasoning accuracy, factual consistency, and instruction-following across technical and generalist domains using structured rubrics, documenting failure modes and edge cases.

Operations Analyst & Startup Generalist | SDS, B2B SaaS startup

Jan 2024 - Oct 2025

- Cross-functional utility role spanning client onboarding, analytics, and product operations, often scoping the work before doing it.
- Served as the translator between engineering and non-technical stakeholders. Wrote plain-language guides that client-facing teams adopted as standard workflow.
- Redesigned client onboarding end to end, cutting time-to-value by ~30% and reducing internal escalations.
- Built Looker Studio dashboards on engagement and funnel health that sales and product used to prioritize.

Therapy Technician | Encompass Health, inpatient rehabilitation hospital

Jan 2022 - Dec 2022

- Direct patient and family care in a high-stress clinical environment. Translated complex clinical information for people at every level of health literacy.
- Proactive expectation-setting contributed to a ~32% rise in unit satisfaction scores.

Digital Marketing & Web Consultant | Freelance

2022 - 2023

- Sole technical contact for small-business clients: built and maintained WordPress sites, ran Google Ads and SEO campaigns, and turned vague requests into shipped deliverables.

EDUCATION

B.S. Neuroscience | Baylor University

Aug 2026

Presidential Merit Scholarship • Coursework: Advanced Statistics (R), Experimental Design, Research Methods, Cognition

SKILLS & TOOLS

Languages: Python, SQL, JavaScript, HTML/CSS

Building: FastAPI, React, Docker, REST APIs, LLM/RAG applications (Ollama, ChromaDB), Claude Code, structured model evals

Other: Looker Studio, Excel, WordPress, Google Ads • Gainsight and HubSpot certified
